## Course Website | Web Development Project

2020 | HTML, CSS, JavaScript, SQL, Flask, jQuery

- Designed user-friendly website with user-interfacing features
- Utilized relational database systems (SQL) to store/manipulate data
- Implemented functions such as anonymous feedbacks, regrade requests, grade updates, and access restrictions to certain data
- Session management used to handle multiple request and services from multiple users

## 211 Service Provider Analysis | Data Analysis Project

2020 | R. Classification, Regression, Modeling

- Built data analysis plans and project reports to suggest ways helpline service offerings in Toronto can be improved
- Queried multiple datasets from reliable sources to find correlations and its relation to the research topic
- Utilized various R packages for data visualizations to present our findings and suggest improvements
- Information regarding demographics, geographic locations, crime rates, frequency of caller locations and more were analysed

## EXPERIENCE

### Universal Phoenix Group
